Art Unit: 1792

6. Claim 1 recites the limitation "...bank component..." in line 16. There is insufficient antecedent basis for this limitation in the claim. Please insert the word--a-- before the word "bank" for proper antecedence.

7. Claim 1 recites the limitation "...outer peripheral surface..." in line 17. There is insufficient antecedent basis for this limitation in the claim. Please insert the word--an-- before the word "outer" for proper antecedence.

***Claim Rejections - 35 USC § 102***

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Japanese Patent Abstract 2000331939.

JP '939 teaches an epitaxial growth device(1), comprising a process chamber (2), a liner part (2a) which forms a part of the side part of the process chamber (2), gas support openings (3a to 3e), and a gas exhaust opening (4). A susceptor (7) for supporting wafer W is provided in the process chamber (2), and a pre-heating ring (9) is provided between the liner part (2a) and the susceptor (7). At the upper part of the pre-heating ring (9) are guide plates (11a to 11f) extending on a placement part (7a) a side of the susceptor (7) from the tip of the plurality of side walls (10) which form the gas supply openings (3a to 3e) in a horizontal direction. The guide plates (11a to 11f) rectify each reactive gas guided into the process chamber (2) and guide it to a specified region on the surface of wafer W placed on the placement part (7a).

***Double Patenting***

10. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

11. Claim 1 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/582,802.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications teach a similar vapor phase growth apparatus.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
